MONTHLY AVERAGE¹

\$57

for Geothermal Heating & Cooling

BREAKING GROUND ON GROUND BREAKING HOMES

You may not realize it, but the homes you build are sitting on a **free and renewable supply of energy**. WaterFurnace geothermal systems tap into the stored solar energy underground to provide savings up to 70% on heating, cooling, and hot water. In fact, the average WaterFurnace owner in Texas pays **only \$57 per month to heat and cool their homes**. WaterFurnace units not only save more money than any ordinary HVAC systems, but also **last 40% longer**, are quieter thanks to no outdoor equipment, and require less maintenance—which all contribute to higher satisfaction levels from your clients.

Contact our WaterFurnace Concierges Team at waterfurnace.com/TexasPower to learn more today.

Scan to learn more about the benefits of switching to geothermal.

Juneteenth Has a Home

MORE THAN THREE years after plans were announced to build a National Juneteenth Museum, Fort Worth officials have made way for the planned 50,000-square-foot museum, food hall, business incubator and theater.

The \$70 million museum of Black history will be built on a plot on the city's Historic Southside, with the city kicking in \$15 million. Opal Lee, the "Grandmother of Juneteenth," gave City Council members two thumbs up.

"Wow, I tell you, I could have hugged everyone, but they've got work to do," Lee told the Fort Worth Report.

Lake of Bluebonnets

Nanny's Blessing [March 2025] touched my heart. In the 1950s my grandparents turned two acres of their Walker County property into a Texas wildflower field, predominately with *Lupinus subcarnosus*, the sandyland bluebonnet.

For almost 50 years, those bluebonnets made their property look like a lake, and people often stopped to take photos. To this day the sandyland bluebonnet, with its gentle shade of blue, is my favorite, although, sadly, they seem to be migrating into obscurity.

GORGING A PATH

BY PAM LEBLANC

For those hard-to-remove, unwanted plants, goats may be the greatest of all time

In a steep, overgrown ravine in the Steiner Ranch neighborhood west of Austin, dozens of goats are buzz sawing their way through a thicket of brambles.

The ruminants work through the brush like furry, four-legged locusts, pausing now and then to share a goofy grin accented with slobbery bits of greenery. Their jaws work nearly nonstop, chewing plants along a trail that winds between houses.

The goats are here to work, hired hands in an army deployed to reduce the risk of wildfire. A blaze in Steiner Ranch during the hot, dry summer of 2011 destroyed 23 homes, and officials are eager to prevent another disaster.

That's why a homeowners association there teamed with Lake Travis Fire Rescue to hire 100 goats from Rent-A-Ruminant as part of an experimental fire mitigation program. The animals spent a week clearing out brush on 7 hard-to-access acres. After they make a first pass, human volunteers finish the job, cutting down and removing downed trees and other fire fuel.

Goats, proponents say, are cheaper, greener and safer than humans with lawn mowers or herbicides that could work their way into waterways. And they're cute.

"They go where man, machine and chemicals can't go," says Carolyn Carr, co-owner of Rent-A-Ruminant.

Goatscaping, as it's sometimes called, is just one form of modern-day goat employment. Besides putting the animals to work clearing poison ivy from urban hiking trails or tidying up grass growing around solar panels, goats can inject a bit of fun into social activities such as yoga, wine tastings and parties.

Bleating and Eating

Carolyn and her husband, Kyle Carr, own a herd of about 600 goats in Brownwood. They hire their animals out to private landowners, municipalities and businesses. Goats, they say, are an eco-friendly solution to maintaining landscaping projects large and small.

The Carrs' herd is made up of nine breeds of goat. Almost all the animals have names, which are noted on brightly colored tags attached to their floppy ears.

"Goats are great," Carolyn says as they stream out of a trailer and into a cordoned-off area of land at Steiner Ranch. Curious residents have gathered to watch the proceedings.

The Carrs started their business after inheriting an overgrown piece of property in Brownwood, about 80 miles southeast of Abilene. Carolyn joked at the time that they needed a herd of "green grazers" to tidy things up.

It turned out to be a smart suggestion. Kyle's father had been a Xerox salesman, with plenty of connections at municipalities around the state. They quickly learned that many of those cities needed help controlling brushy overgrowth.

Goats can clamber up and down steep slopes and reach awkward spaces that heavy machinery can't access. They also clip vegetation growing along sensitive waterways where herbicides shouldn't be used. Best of all? They love plants that make humans itch or stab them with thorns or assault airways, including green briar, poison ivy, ragweed and blackberries.

LEFT Goats groom the terrain of Steiner Ranch outside Austin.

ABOVE Rent-A-Ruminant owners Kyle and Carolyn Carr manage a herd of about 600 goats that can landscape in hard-to-reach areas.

The Carrs travel the state with their herd, which has trimmed up Hermann Park in Houston, munched invasive species while all but ignoring the lush lawn at the Houston Arboretum, and cut back poison ivy along the Ann and Roy Butler Hike-and-Bike Trail around Lady Bird Lake in downtown Austin.

But not just any goat can make the Rent-A-Ruminant team. Only quiet goats that don't pester people for food can become part of the traveling work crew, Carolyn says.

Sometimes, onlookers set up chairs to watch the goats in action. That's fine with the Carrs, as long as the humans don't distract the animals by feeding or petting them.

"They have a job to do, and this is not a petting zoo," Carolyn says.

Sheep, she says, can do similar work, such as "mowing grass" that grows around rows of sun-collecting panels at solar farms. Both species have their niche—sheep prefer grass over leaves, making them good at keeping lawns and weeds in check. Goats prefer leaves, so they're better at tidying up unruly brush.

In Steiner Ranch, the experiment seems to be working. The HOA and fire department split the \$9,000 tab to hire the goats, and even after a few hours, the difference is obvious.

"We have a lot of area and so much poison ivy," says Debbie Tanner-Jacobs, president of the Steiner Ranch Residential Owners Association.

As a bonus, the goats leave behind a little fertilizer, in the form of their droppings. Goats, Carolyn Carr notes, sterilize seeds that pass through their bodies, so they can't repropagate those pesky plants.

PHOTOS THIS SPREAD: PAM LEBLANC

CLOCKWISE FROM LEFT Krystal Evans of Kyle and a new friend that is not at all sheepish at a Goat Shenanigans event at the Hive coffee shop in Austin. Shirley Marek cuddles a goat at Blue Lotus Winery in Seguin. Kids get to know each other at the Hive. Katie Knox with a baby goat at Blue Lotus.

Kidding Around

San Antonio-based Goat Shenanigans puts goats to work in a different way.

On a crisp afternoon in January, 10 goat enthusiasts convene at Blue Lotus Winery in Seguin, where they sip wine and cuddle a pair of Nigerian dwarf goats, each just three or four weeks old.

Besides happy hours with goats, the company organizes yoga classes, toddler gatherings, movie nights and beer tastings, all in the company of adorable baby goats.

They'll even deliver a "goat gram"—a livelier version of the traditional candy gram—to your home to celebrate a special occasion. A single-goat visit lasts 20–30 minutes, but you can add additional ruminants to the order.

Goat Shenanigans also offers ranch visits. Visitors can pay for a 10-, 30- or 60-minute session on the goats' home turf, on the northwest side of San Antonio.

"Whenever a goat is involved, it's going to be a good time," says Laura Romer, manager of Goat Shenanigans. "The best thing about them is they have different personalities. A cow is a cow, but a goat has its own unique personality. They're very loving, very playful and emotionally intelligent. They bring out so much joy in people."

The goats seem to enjoy their work. Aside from a chorus of high-pitched bleats that sound like out-of-tune harmonicas,

they zoom around an outdoor patio at the winery and accept an overflow of snuggles from their admirers.

"They're not afraid of people," Romer says. "They're motivated by food and love to be cuddled."

Allyson Marek of San Marcos learned about Goat Shenanigans through social media and bought tickets for the wine tasting with goats for herself and her parents for Christmas.

"They're just so cute and mischievous and silly," Marek says as she holds one, a bright-eyed armful of soft hair named Thor with a tongue that sticks out with each bleat. "Oh my gosh, amazing. They're so soft, so chill, so very awesome."

One day, when she has enough land, Marek says, she hopes to own her own herd. She dreams of raising goats for their milk and to make cheese and soap.

Another afternoon, a dozen children and their parents (along with a few adults who can't resist) gather at the Hive coffee shop in South Austin to mingle on an outdoor patio with four animated, beagle-sized baby goats.

"I like how they're kind of like dogs but cuter," says Evelyn Jackson, who has come to the event with her mother, a sister and a friend.

All around Jackson, kids—the human kind—offer the hardworking goats kibble and pet their soft bodies. Two of the goats wander into the coffee shop's garden, where they sample herbs growing in a raised bed. Another hops onto a picnic table and stares down a woman sitting there.

"How can you be upset with a baby goat in your arms?" asks goat wrangler Sarah O'Brien, who is doing her best to keep her charges in line.

You can't. And that's why we need more goats in the workforce. ■

TCP Watch the video on our website and get to know these hardworking and lovable animals.

BY PATTI PFEIFFER

Steel to the Stars

While a consequential steel mill rusts, locals ensure memories shine on

The Lone Star State is known around the world. The town of Lone Star, however, isn't well known—even among Texans.

But it should be. So says a group of 13 volunteers working to bring light to the East Texas town of 1,400 people about an hour southwest of Texarkana. They want to share the rich history of its steel plant, metal from which spanned the skies over Vietnam and the subsurface of the oil industry and deeply impacted the U.S. economy, environment and space exploration.

They call themselves the Ladies of Lone Star, and their goal is plain.

"We want to gather memories and record as much of the history of Lone Star Steel as possible for future generations," Lesley Dalme says.

It all began with an idea about décor.

Randy Hodges, former Lone Star mayor who was technical services manager when his 45-year career at the plant ended with its closing in 2020, proposed adorning the walls of the Lone Star Senior Citizens Center with pictures of the plant. The framed photos caught the attention of locals, and the project was born.

PHOTOS THIS SPREAD: COURTESY LADIES OF LONE STAR

The Ladies of Lone Star collect photos, documents and memorabilia to preserve and showcase the town's shuttered steel mill.

...s take are Robert Russell, E.D. ...
...ss, David Childress (inspection),
... and C.A. Burris.

Smith, B.C. Dobby, T.M. Howard, Jr., W.J. McCarty

John, Missa and (top of) his cake, the old Mrs. Missa and her crew
who recently are finishing work.

P.E. Moore, Orell Adams, E.E. Williams, G.G. Nickleberry, Alton Harris,
Harold Barber make up another cutoff crew.

Photos and Text by Dave Lewis

EDITOR'S NOTE:—Due to mill scheduling requirements, some employees have been pictured more than once while working on different crews. There may also be some who participated in the record-setting finishing turns who aren't pictured. However, everyone involved is credited with the team effort required to set such records.

COURTESY LADIES OF LONE STAR

JAY PATRICK

CLOCKWISE FROM LEFT Several volunteers from the Ladies of Lone Star in the mill's chapel, the site of hundreds of plant employees' weddings over the years. A wind tunnel that could simulate the vacuum of space using blast blowers. Randy Hodges, the former mayor of Lone Star who worked at the plant for 45 years, with his father's hard hat. From left, former mill worker Bruce Shimpock and Lesley Dalme and Lanita Goodrum of Ladies of Lone Star look over artifacts.

I sat down with three members of the Ladies of Lone Star as well as Hodges and John Shivers, a former plant manager and vice president. For nearly two hours in the chapel on the grounds of the shuttered plant, I listened and learned about the steel industry, the plant's history and the impact it had on people, places and events far and wide.

The plant was built with federal funding during World War II in the small town of Lone Star, selected because of its strategic location. Nearby are ore, limestone and coal—the three essentials for steel production—and the Port of Houston is driving distance.

While the 600-acre plant came about because of the war, steel didn't start rolling out until the mid-1940s, after the war's end. In the early 1950s, the oil industry began booming and with it the market for pipe.

"An idea came about to buy surplus war project product

to manufacture oil pipe," Shivers says. "It took two years to adjust production and install necessary mills at a cost of \$76 million. The oil industry fluctuated, going from boom to bust. Likewise, LSS profited hugely and suffered severely."

LSS also played a role in the Vietnam War.

"We would make large-diameter tubes to be used as bomb casings, which would be cut to bomb length, shipped by rail or truck to an ammunition plant in Karnack, filled with ammo, a fin was attached, then they would be transported to the Port of Houston," Shivers says.

The steel mill had a wind tunnel that could simulate the vacuum of space using blast blowers. Known as the Ordnance Aerophysics Laboratory, the highly secure site operated from 1945 to 1968 and employed hundreds of scientists, technicians and engineers. Department of Defense contractors conducted thousands of tests for supersonic jet engines, guided missiles and spacecraft components for the military and NASA.

"The facility was well-known around the community, but because of security, it was not known around the country," Hodges says. "They researched and designed rocket engines here, including components used for the Saturn rocket. They would bring equipment in on a bread truck, and once inside the plant, securely situated behind closed metal doors, the bread truck doors would open, and parts would be unloaded."

Members of the project liked the area so much, amid the verdant Pineywoods and alongside the 1,500-acre reservoir

COURTESY LESLEY DALME

“We want to gather memories and record as much of the history of Lone Star Steel as possible for future generations.”

built for the steel plant, many of them stayed and went to work for LSS.

They brought with them a wealth of knowledge and talent that led to industry innovations. For example, a device that scrubbed smokestack emissions was developed at LSS, Shivers says.

“It cleaned better than anything on the market,” he says. “We sold it to other cities—Houston, Shreveport—a nuclear facility in Georgia, and other customers in the U.S. and abroad.”

However, economic downturns in the 1980s plagued the steel industry. In 1989, Lone Star Steel filed for bankruptcy.

“Our labor contract expired, and we worked two years without one,” Shivers says. “We just kept going, no contract and no complaints. It took a couple of years, but we came out of bankruptcy and paid off 85% of the debt, and a few years later were profitable again.”

In 2007, U.S. Steel purchased the plant for more than \$2 billion. Nine years later the mill was idled and then completely shuttered in 2020. At the height of production, the company reportedly employed more than 6,000. Now, other than security personnel, the facility is vacant. Equipment sits silent while rust and dust mount.

The Ladies of Lone Star are dedicated to preserving documents dating to the early 1940s and photographs showcasing the plant’s long and vibrant history. They also have begun meeting with former employees, recording and then transcribing their stories to be compiled into a book chronicling the mill’s story.

“The plant is being dismantled, and eventually it will be no more,” says Lanita Goodrum, one of the volunteers. “And it’s even more important that people know what made Lone Star, what those men did in that plant and the impact it had on our nation.”

JAY PATRICK

When our time together winds down, Hodges, who started at the steel plant in 1974, offers a trip to the senior center—an invite I eagerly accept. As we walk by each photo on the walls, he enthusiastically explains the images.

“I worked with World War II vets, young men with families—our plant was filled with people like that, hardworking parents who had to make a living regardless of the long hours, the hard and dangerous work,” he says. “In a world that was so divided, we were working for a common cause.”

On top of a piano is something that goes beyond mere nostalgia—Hodges’ father’s hard hat from his long career at the plant. “His first paycheck in 1953 is what paid for my mother to go and me to be born at a hospital,” Hodges says. “It was more than a job and career. We were family.”

And it was a family that survived, thrived, accomplished a lot and had an enormous impact. They are proud of LSS, still—its impact of 80 years, from Earth to the heavens, the industries it changed from oil to aerospace, and the lives it touched.

As Shivers says, “Our footprint ranges far beyond this steel plant.” ■

Tactical Meets Practical

Luxury Swiss brands like Rolex® and Patek Philippe® charge thousands, but the Stauer Swiss Tactical Watch delivers the same precision for less. Inspired by military timepieces like the A-11, it's built for action with rugged design and expert craftsmanship.

Swiss Precision, Limited Edition

Each watch takes nearly nine months to complete and only 4,900 will be made. Crafted by master watchmakers — some from top luxury brands — this is true Swiss quality without the inflated price.

Built for Performance

With high-contrast markers, a shock-resistant case, and Swiss-made movement, it's designed for reliability, not status.

Limited Offer – Act Now

Why pay more when you can own precision, heritage, and adventure for less? With only 4,900 available, when they're gone, they're gone. Order now — time is running out.

Watch Specifications:

- Made in Switzerland with precision
- Swiss Ronda 515 movement.
- Stainless steel caseback.
- Brown leather band.
- 44 mm diameter case.
- Date window at 3 o'clock.
- Water-resistant to 3 ATM.
- Fits wrists up to 8 1/4"

Summer Savings – Our Shared Responsibility

AS THE TEXAS SUMMER UNFOLDS, bringing with it the joys of longer days and more time with family, we recognize the increased demands placed on our state-wide transmission infrastructure. This is a time when, as a cooperative, our collective efforts to manage system demand become particularly vital.

Medina Electric Cooperative's strength lies in the vast and diverse service area we cover, from homes and businesses of all sizes to schools, farms, and ranches. The variety of needs of energy consumers reminds us of the importance of a unified approach to energy conservation, particularly during the summer months when the state's electric grid experiences its highest peaks.

BRENDA CARSON | ADOBESTOCK

The significance of mindful energy use during the summer months cannot be overstated. It directly benefits our members through lower monthly bills and helps us manage Medina EC's wholesale power costs, which are significantly influenced by our system's demand during summer peak periods.

Our agricultural members on the irrigation rate play a crucial role in lowering wholesale power costs through the load management program. By voluntarily allowing us to temporarily interrupt power to irrigation equipment from June through September, they directly contribute to reducing Medina EC's overall system demand during the state-wide peak. Their par-

ticipation helps lower future power costs for the cooperative and those cost savings are passed back to them through a reduced electric rate.

Beyond our irrigation accounts, every member has the power to contribute to lower demand thus reducing the wholesale power costs. Adjusting your thermostat a few degrees upward during peak hours from 3:30 p.m. to 7 p.m. and being mindful of using nonessential appliances like your dishwasher or washing machine during these times are simple yet effective ways to reduce our overall energy footprint. Learn more about monitoring your power usage through consumer analytics on page 20.

I encourage you to explore practical tips and learn more about how you can contribute to summer energy savings by visiting our website at MedinaEC.org/EnergySavings. Together, we can ensure a more sustainable and affordable energy future for our cooperative.

Until next time,
Trey

DID YOU KNOW?

- An impressive 75% of Medina EC irrigation accounts participate in the load management program.
- The highest amount of megawatts shed during the 2024 load management season was 33.8 MW.
- The average load shed in the summer of 2024 was 25.5 MW.
- Medina EC's peak load in 2024 was 358 MW. 1 MW powers approximately 250 homes.

Do You Have a Medical Need for Electricity?

IF SOMEONE IN YOUR HOME depends on an electrically operated health aid, your account should be listed on Medina Electric Cooperative's Critical Care Registry. To be added, fill out the form at MedinaEC.org/Registry and attach a physician's directive or prescription.

Accounts on this list are notified before planned outages and are flagged as a priority for restoration during unplanned outages. Being on the registry does not guarantee uninterrupted electrical service and will not prevent you from losing power for reasons outside the cooperative's control or from being disconnected for nonpayment.

Individuals who rely on life-support equipment should have an emergency plan, including a place to go in the event of an extended power outage, and should consider obtaining backup equipment, such as a generator and any necessary fuel or a battery backup system. You can learn more about the requirements to connect a generator to our system at MedinaEC.org/Generators.

Protecting Your Privacy

YOU HAVE ENTRUSTED Medina Electric Cooperative with personal and confidential information so that we can manage your electric account, and protecting that information is an integral part of the service we provide. We use your name and Social Security number to verify your identity when you sign up for service and when you call with questions about your account.

Your information is kept in encrypted files behind protected firewalls. Only qualified Medina EC employees can access the information. Our information technology department ensures that firewalls and antivirus applications prevent unauthorized access.

Printed documents containing member information are kept in locked shredding containers and destroyed.

Your information is never sold or given to anyone for the purpose of selling you something. Some information might be provided to third parties acting on behalf of Medina EC and can be disclosed as required by law.

We take the responsibility to protect your personal and confidential information very seriously. Failure of an employee to comply with Medina EC's privacy policy results in punishment and can include termination.

You can also take steps to ensure that your private information stays private and that you don't unknowingly fall victim to a utility scam.

If you get an email that you aren't expecting, don't click on links or reply to it, and don't give out personal information (name, Social Security number, etc.). If the email appears to come from someone you do business with, call them to verify.

Never allow anyone into your home to check electrical wiring, natural gas pipes or appliances unless you have scheduled the appointment or reported a problem. Don't be afraid to ask a utility employee for proper identification. If they are on your property, you have every right to verify that they are who they say they are.

Medina EC Celebrates Right-of-Way Professionals Week

IN HONOR OF Right-of-Way Professionals Week, June 9-15, we would like to recognize our team members involved in right-of-way management. Right-of-Way Professionals Week shines a light on the dedicated individuals who play a crucial role in acquiring, managing, and clearing the land necessary for essential infrastructure projects. This includes Medina Electric Cooperative’s vegetation management coordinators, Joshua Roberts and Wesley Bohl, and Medina EC’s right-of-way specialist, Barbara Broll.

Roberts and Bohl work to maintain our members’ beautiful surroundings and ensure a 40-foot right-of-way around power lines is clear from vegetation to provide a reliable power supply. Broll helps members and Medina EC procure the necessary easements for our infrastructure.

5 Tips To Reduce Wildfire Risks

WILDFIRES ARE NO LONGER CONFINED to the western United States. Traditionally associated with dry, fire-prone regions like California, wildfires are now affecting areas in the Midwest and even parts of the Southeast.

This shift is driven by rising temperatures, prolonged droughts and changing weather patterns, which are creating conditions ripe for fires in regions that historically saw fewer of them. As a result, more communities are now facing growing threats from wildfires, prompting a need for broader awareness and preparedness nationwide.

Medina Electric Cooperative is working to reduce the risk of wildfires throughout our service territory. Through regular vegetation management and grid maintenance and hardening practices, we are proactively working to reduce risks and improve the reliability of our local system.

As a member of Medina EC, there are steps you can take to prevent wildfires.

- 1. Properly extinguish campfires.** Always douse your campfire with water, stir the ashes and ensure everything is cool to the touch before leaving the area.
- 2. Don’t burn on windy days.** Avoid outdoor burning when it’s windy or dry, as embers can easily spread and ignite surrounding areas.
- 3. Clear vegetation and debris.** Maintain a defensible space around your home by removing dry leaves, dead branches and other flammable materials.
- 4. Use equipment safely.** Tools like lawnmowers or chainsaws can spark fires. Use them during cooler times of the day and keep them in good working condition.
- 5. Follow local fire regulations.** Always check for burn bans or restrictions in your area before burning anything or using open flames outdoors.

For more information on wildfire prevention and preparedness, visit [RedCross.org](https://www.redcross.org).

Capital Credits Allocations on Your June Bill: What It Means for You

MEDINA ELECTRIC COOPERATIVE MEMBERS WILL SEE their 2024 capital credits allocations printed on their June bill. These totals represent the 2024 margins that are being assigned to you, and you may be wondering exactly what that means.

At the end of each fiscal year, the funds remaining after expenses have been paid—or net margins—are allocated to members’ accounts based on the member’s monthly electric bill. The allocation totals do not represent cash owed to you at this time nor can they be applied to your current bill. You may be asking why you can’t have the money that is allocated to your account.

As a member of Medina EC, you reinvest in the cooperative through your capital credits allocations. These funds are used to repay long-term debt, make system improvements, repair storm damage and take care of other capital needs to provide safe, reliable electricity at the lowest possible cost.

At the end of each year, the board of directors determines if any portion of capital credits allocations can be retired based on the financial condition of the cooperative, its bylaws and policy provisions, and lender requirements. The amount retired, if any, can change from year to year depending on the financial needs of the cooperative.

Once capital credits are retired, members receive them as either a credit on their bill or a check. Each retirement is a portion of the total allocation that has been assigned to your account.

“The distribution of capital credits perfectly embodies Cooperative Principle number three, which is member economic participation,” said Trey Grebe, Medina EC CEO. “It highlights how each Medina EC member contributes proportionally to the financial health and development of our cooperative.”

To learn more about capital credits and see a list of unclaimed credits, visit MedinaEC.org/CapitalCredits.

It’s important to keep your address up to date, even after you’re no longer a member, so we can return any future capital credits retirements to you. In the event of the death of a member, contact us to see if the account is eligible for early retirement. You can update your account by calling 1-866-632-3532 or logging in to your SmartHub account.

Give Your Washer and Dryer a Longer Life

YOU CAN EXTEND the life of your washer and dryer—and your clothes too—by treating your appliances with care on laundry day. Here’s how.

Clean the dryer’s lint filter after every use. Occasionally vacuum the chute that houses the filter.

Unfasten the duct from the dryer at least once a year and vacuum it.

Cut down on drying time if your clothes consistently come out wrinkled. That means you’re overdrying.

On nice days, skip the dryer completely by installing and using a clothesline.

Avoid overloading your washing machine with comforters, rugs and large blankets. Look in your owner’s manual to learn how much weight your washer’s tub can handle.

Balance your load. Washers can fail when heavy loads bang around in an unbalanced machine.

Replace your water intake hoses every five years, even if they look OK. Older hoses are prone to bursting.

JAMES PAULS | ISTOCK.COM

Upcoming Vacancy in Voting District 3

MEDINA ELECTRIC COOPERATIVE is seeking applications for an upcoming board vacancy. Annette Sorrells is not seeking reelection this year, and Medina EC did not receive any petitions for this position on the board of directors. Voting District 3 represents members in Brooks, Dimmit, Duval, Jim Hogg, La Salle, McMullen, Starr, Webb and Zapata counties.

Medina EC's board of directors represent the best interests of the members of the cooperative. They are responsible for setting operating policies and making decisions regarding the financial health and well-being of the cooperative. Directors are expected to attend and actively participate in regular monthly and special meetings, strategic planning sessions, workshops, the annual membership meeting, and commit to participating in training programs and conferences. Many of these meetings happen during regular business hours and some may require travel. New board members are also required to attain their Credentialed Cooperative Director Certificate within one year.

Individuals who wish to be considered for this board position must be willing and able to dedicate ample time to represent the members of the cooperative and meet the qualifications as outlined in Article 4: Board of Directors of the Bylaws and the Governance Policies.

Board Director Position Upcoming Vacancy Voting District 3

Open for members with Medina Electric Cooperative service in Brooks, Dimmit, Duval, Jim Hogg, La Salle, McMullen, Starr, Webb and Zapata counties.

If you're interested in being considered for this board seat, please learn more and complete the application at MedinaEC.org/Vacancy by July 11. The Director Search Committee will review the qualified individuals, and in accordance with a governance policy, will appoint a new director to fill the vacancy, which will be seated in late October.

For questions or information, email MyCoop@MedinaEC.org or call 1-866-632-3532 ext. 1008.

Stay Cool and Save This Summer

SUMMER MONTHS bring some of the highest energy bills of the year. But why? Cooling your home accounts for a large portion of your monthly energy use, and the hotter it gets, the harder (and longer) your air conditioner works to keep you cool.

Here are a few ways to help you save—not only during the dog days of summer but throughout the year.

- **Raise your thermostat.** The smaller the difference between the indoor and outdoor temp, the more you'll save.
- **Install window coverings** like blinds or light-blocking curtains to prevent indoor heat gain during the day.
- **Rebates.** Medina Electric Cooperative offers six ways to give you rebates for the efficient equipment you purchase and more, like HVAC tune-ups and an electronic programmable thermostat. Many of our rebates can be claimed by simply filling out a form. Find a list of all our rebates at MedinaEC.org/Rebates.
- **Seal leaks with caulk and weatherstripping** around windows and exterior doors. Air leaks force your air conditioner to work harder and run longer than necessary.

- **Run ceiling fans** for additional

cooling but turn them off when you leave the room.

- **Monitor your electricity** using consumer analytics through SmartHub. Medina EC's residential members can gain a deeper understanding of energy usage, specifically pinpointing which appliances are driving up electric bills and by approximately how much. Learn more at MedinaEC.org/ConsumerAnalytics.

By implementing these energy-saving tips, you'll not only lower your monthly bill, but you will also help reduce overall demand on the ERCOT power grid, contributing to a more stable power supply for all Texans. To stay informed about ERCOT grid conditions, we encourage all members to sign up for TXANS alerts at ERCOT.com/TXANS.

BILL CHIZEK / ADOBESTOCK

Safe Travels, Youth Tour Delegation

THREE STUDENTS FROM THE MEDINA ELECTRIC COOPERATIVE service area will join more than 1,700 others from across the country on the trip of a lifetime June 15-23 as part of the Government-in-Action Youth Tour. In addition to the trip, the contest winners will receive a \$2,000 scholarship toward their educational expenses after they graduate from high school. The students will gather in Austin and then head to Washington, D.C., where they will visit major landmarks, meet their elected officials, and learn about the U.S. and electric cooperative history.

Youth Tour has a long record of educating young people about our government. Then-Sen. Lyndon Baines Johnson inspired the trip when he addressed the National Rural Electric Cooperative Association Annual Meeting in Chicago in 1957. The senator declared, “If one thing goes out of this meeting, it will be sending youngsters to the national capital where they can actually see what the flag stands for and represents.”

Since then, more than 100,000 young Americans have participated in this educational program. Medina EC has sent 48 students on the trip since 2007. More information about Medina EC’s Youth Tour program can be found at MedinaEC.org/YouthTour.

Applicants were asked to write an essay in response to the following prompt: **What would life be like without electricity? How does it add value to our lives?** Applicants were also asked to provide a list of their extracurricular activities and community involvement and to describe their career goals and why they wanted to attend Youth Tour.

Read a snippet of the 2025 delegates’ essays below. Sign up to receive information about the 2026 Youth Tour trip at MedinaEC.org/YouthTour.

And the Winners Are ...

PEYTON BEARD
D'HANIS

“Without electricity technology as we know it would not exist. We would have been forced to learn more about our agriculture and focus more on our education of other avenues of production.”

“Without electricity, society as we know it would fall apart. We would be thrust into a literal dark age, and the consequences would be disastrous. Plunged into darkness, we would be required to relearn the primitive ways of our early ancestors, as all advancements and discoveries would grind to a halt.”

SIERRA NICKEL
UVALDE

OLIVIA REYES
EDINBURG

“Our social relationships would be very different if screens and digital communication weren’t everywhere. We would gather around roaring fires, sharing stories and having deeper relationships with friends and families... it would teach us to have patience and anticipation, as we would be able to eagerly wait for letters or engage in face-to-face conversations.”

Medina EC Awards \$50,000 in Scholarships

TWENTY-FIVE AREA STUDENTS have an extra \$2,000 to help with their education expenses next school year.

Medina EC awarded \$50,000 in scholarships to area students this May. The scholarship program is an important part of the cooperative's commitment to community and to education. Since it began in 2000, the co-op has awarded more than \$752,000 in scholarships to 543 students from our service area.

Learn more about the scholarship program requirements and eligibility at MedinaEC.org/Scholarships. The scholarship applications generally open and have a deadline in the first quarter of each year. If you have applied in the past and have not won, look for information on next year's scholarship program in January or February 2026.

Amazing Grace Danforth

The trailblazing doctor was a champion of women's rights

BY CLAY COPPEDGE • ILLUSTRATION BY STEPHANIE DALTON COWAN

THE DALLAS *Daily Times-Herald* tried to compliment Dr. Grace Danforth by saying she was “a woman with a man’s mind,” but the pioneering physician had a mind all her own.

Danforth was the first woman accepted as a member of the Dallas County Medical Association, the first woman to practice medicine in Williamson County and a founding member of the Texas Equal Rights Association.

Danforth was also a member of the Woman’s Christian Temperance Union, which made her death from a drug overdose all the more puzzling.

Born in Wisconsin in 1849, she lived

most of her life in Texas, moving with her family to northeast Texas as a young child.

For a while it appeared she would follow in her father’s footsteps as a traveling music teacher, but she found the classroom too confining. She considered bookkeeping and pharmacy before deciding on medicine, studying at the Woman’s Medical College of Chicago, where she first became involved in the campaign for women’s voting rights.

She returned to Texas as a licensed physician and dedicated suffragist.

By 1889, she was practicing medicine in the small town of Granger, north of Austin, at a time when there were only

a few thousand female doctors in the U.S. She organized local suffrage groups and promoted their activities. She advocated for inviting visionary suffragist Susan B. Anthony to Texas.

We know now that Danforth suffered from cluster headaches, which are uncommon, unpredictable and debilitating. And even though Danforth may have prescribed laudanum, a tincture of opium dissolved in alcohol, to treat pain and other ailments in her patients, she didn’t take it herself.

It’s possible she only took it once, on the night of her 46th birthday, February 21, 1895, when she died of an overdose. Stories about her death vary. Some say she overdosed on the drug antipyrine; others say laudanum.

Armies and expeditions of the day didn’t leave home without laudanum. Lewis and Clark took the drug, along with some raw opium, on their voyage of discovery. Doctors in the 19th century prescribed laudanum for nearly everything: colds, meningitis and even heart diseases.

Laudanum, it seems, never failed to make patients feel better. Unless it killed them.

Wayne Bethard, a pharmacist and historian in Texas, wrote in his book *Lotions, Potions, and Deadly Elixirs* that laudanum, like today’s opiates, lowers a patient’s pain threshold. Over time it takes more medicine to treat the same pain, but someone who doesn’t take narcotic pain medication has no tolerance to the drug. A dose large enough to calm a cluster headache could be fatal.

“Dr. Danforth was one of the most remarkable women in Texas,” the *Daily Times-Herald* wrote the day after her death. She was buried in the Granger City Cemetery.

“There was a great prejudice existing against her sex entering the learned professions, and it is not likely she got much practice,” the newspaper wrote. “But she was a woman of a vigorous and active mind, and she soon took a leading part in all reforms.” ■

Summer Pastas

We say summer, but you'll be turning to these dishes all year

BY VIANNEY RODRIGUEZ, FOOD EDITOR

A pan of homemade lasagna bubbling away in the oven is so dreamy, but this food editor is busy, so I'm busting out a skillet to re-create the dream in under 30 minutes on the stovetop. I finish by quickly broiling the cheese—an optional step but so worth it.

Turkey Skillet Lasagna

2 tablespoons olive oil
1 pound ground turkey
½ medium onion, diced
2 cloves garlic, minced
1 jar marinara sauce (24 ounces)
1½ cups chicken broth
1 cup sliced fresh mushrooms
10 uncooked lasagna noodles, broken into 2-inch pieces
1 cup ricotta cheese
¼ cup grated Parmesan cheese
1 teaspoon Italian seasoning
1 teaspoon salt
1 cup shredded mozzarella cheese

1. Heat olive oil in a 12-inch oven-safe skillet over medium-high heat. Add ground turkey and onion. Break up turkey with spoon and cook until turkey is fully cooked, about 8 minutes. Stir in garlic and cook an additional 2 minutes.
2. Add marinara sauce and broth. Bring to a boil.
3. Add mushrooms and lasagna noodles and stir to separate noodles. Return to a boil, then reduce heat, cover and cook 10–12 minutes or until noodles are tender, stirring occasionally. If using broiler, pre-heat it while the noodles cook.
4. In a bowl, stir together ricotta, Parmesan, Italian seasoning and salt.
5. Dollop cheese mixture by the spoonful on top of pasta. Cover and cook 5 minutes, until cheese is warmed through. Uncover skillet and top with mozzarella. If desired, broil 3 minutes or until cheese is melted and lightly browned. Serve warm.

SERVES 6

TCP Follow Vianney Rodriguez as she cooks in Cocina Gris at sweetlifebake.com, where she features a recipe for Queso Mac and Cheese.

Summer Corn Pasta Salad

NANCY GRIFFITH
BANDERA EC

Griffith's dish is a tasty combination of fresh veggies and pantry staples, making it a new addition to my list of rotating meal plans. As the pasta cooks, I can quickly chop up the veggies, and the dressing is a snap to whisk together. I served it with baked chicken, but it would also be amazing with fried chicken or baked salmon.

- 16 ounces uncooked rotini
- ½ cup red wine vinegar
- ½ teaspoon dried oregano
- ½ teaspoon ground cumin
- ½ teaspoon salt
- ½ teaspoon ground black pepper
- ½ cup avocado oil
- 1 can black beans (15 ounces), rinsed and drained
- 1½ cups corn kernels
- 2 tomatoes, diced
- 1 red bell pepper, diced
- ½ cup sliced black olives
- ¼ cup chopped fresh cilantro
- ½ cup diced green onions
- ¼ cup diced red onion

1. Cook rotini according to package directions.
2. In a large bowl, whisk together vinegar, oregano, cumin, salt and pepper. Whisk in avocado oil.
3. Add rotini to the dressing and stir to coat. Stir in beans, corn, tomatoes, bell pepper, olives, cilantro, green onions and red onion until thoroughly combined.
4. Cover and chill until ready to serve.

\$500 WINNER

Pickle Popper Pasta Salad

PATRICIA STEHLING
CENTRAL TEXAS EC

Pickle pasta, where have you been all my life? The way I devoured this pasta—it's so, so good and even easier to whip up. I mean, c'mon—pickles, ranch and bacon ... winner, winner.

- 12 ounces uncooked large elbow macaroni
- 1 cup mayonnaise
- ½ cup sour cream
- ¼ cup pickle juice
- 2 tablespoons ranch seasoning
- ¼ cup diced dill pickles
- 8–10 slices bacon, cooked and crumbled
- 2 cups cherry tomatoes, quartered
- 2 tablespoons fresh dill, minced (optional)

1. Cook macaroni according to package directions and allow to cool.
2. In a large bowl, stir together mayonnaise, sour cream, pickle juice and ranch seasoning.
3. Add macaroni, pickles, bacon and tomatoes and stir until well combined.
4. Serve garnished with fresh dill, if desired.

SERVES 6–8

UPCOMING: HOLIDAY BREAKFAST DUE JULY 10

Pasta With Prosciutto and Peas

KERRI RUSS
TRINITY VALLEY EC

I appreciate a pasta dish with texture. I want it to be crispy or crunchy, and this pasta gives it to me. I enjoyed this dish when I first made it but even more the next day for lunch.

12 ounces uncooked fusilli
10 ounces frozen peas
4 tablespoons extra-virgin olive oil,
divided use

3 ounces prosciutto, diced
2 cloves garlic, thinly sliced
1 tablespoon lemon juice
½ teaspoon salt
½ teaspoon ground black pepper
1 cup grated Parmigiano-Reggiano
cheese, divided use
½ cup chopped fresh parsley,
divided use

1. Cook fusilli according to package directions and set aside.
2. Steam peas according to package directions and drain.
3. In a skillet, heat 1 tablespoon olive oil over medium-high heat. Add prosciutto to the skillet in a single layer and fry until crispy. Place on paper towels to drain.
4. Add remaining 3 tablespoons olive oil to skillet, along with garlic. Cook until garlic begins to brown.
5. Pour garlic mixture into a large bowl, and add prosciutto, fusilli, peas, lemon juice, salt and pepper to bowl. Stir to coat.

Water Wise

BY VIANNEY RODRIGUEZ

Next time you're making spaghetti or fettuccine Alfredo, don't toss the water used for cooking pasta. Save a few cups before draining and reap the tasty benefits. It's loaded with rich starch from the pasta. Adding a cup or so of pasta water can help emulsify any sauce. It enhances flavor absorption, prevents pasta from drying out and helps sauce cling to pasta.

6. Stir in ¾ cup Parmigiano-Reggiano and ¼ cup parsley.
7. Serve garnished with remaining ¼ cup Parmigiano-Reggiano and ¼ cup parsley.

SERVES 4

COURTESY CHET GARNER

Enter the Bare Cage

Lace up for an eerie hike among former zoo pens in this boomtown

BY CHET GARNER

THE CAGES WERE all empty—at least what was left of them. But that didn't stop me from having the strange feeling that something was watching me as I hiked through the remnants of an abandoned zoo just outside Cisco.

This small town is about 100 miles west of Fort Worth and boasts a couple claims to fame. First is the Mobley Hotel—the initial hotel purchased by Conrad Hilton, in 1919—and second is an infamous 1927 bank robbery led by a man dressed as Santa Claus.

And third is the old zoo nature trails on the banks of Lake Cisco.

The zoo was built in 1923, during the height of an oil boom. It was to be the crown jewel of a tourist camp that also included a huge swimming pool just below the newly formed lake.

At its peak, the zoo had a number of cages built into the sandstone cliffs and held a strange menagerie of animals, including a bear, deer and flamingo. Sadly, its heyday was short-lived as animals died under “unusual circumstances,” and by the 1930s, everything was abandoned.

For decades, the ruins of the zoo were known to only a few, and it seems most of them were graffiti artists. It wasn't until 2021 that a local nonprofit got permission to clear the paths, haul out the garbage and turn the old zoo into a public nature trail.

Walking the paths and peering into the old cages makes for an interesting, albeit creepy, nature walk. Pieces of rusted metal mark the outlines of the former enclaves. The only sounds you'll hear are the wind and the occasional bird or squirrel scampering up a tree.

But it isn't hard to imagine the growls of bears and howls of monkeys or those beady little eyes peering back at you. ■

ABOVE The empty habitats of an abandoned zoo embolden Chet.

TCP Watch the video on our website and see all Chet's Texplorations on *The Daytripper* on PBS.

This is not your grandpa's hearing aid

The Nation's 1 Rated Hearing Aid

Say hello to Horizon IX by hear.com

This tiny, German-engineered hearing aid is taking the U.S. by storm this year. Why?

Partly because it's tiny. Like James Bond tiny. And partly because it boasts one of the world's first-ever dual processing systems.

This is special because it's the first time engineers have been able to pack not one, but two state-of-the-art computer chips into a device this small.

That means double the power and double the clarity in conversation. In non-science-y talk... it means you get maximum speech clarity with minimal background noise.

But that's not all. Horizon IX hearing aids are packed with features that make conversation effortless and everyday life easier:

- ✓ **Amazing Speech Clarity™**
- ✓ **Virtually invisible design**
- ✓ **Bluetooth connectivity**
- ✓ **Rechargeable batteries**
- ✓ **Easy, comfortable fit**
- ✓ **Free smartphone app**

And you get it from a device so small, it hides completely behind your ear.

Plus, with convenient in-person and at-home options, and 2-day delivery to anywhere in the U.S., hear.com brings cutting-edge hearing care right to you.

“ This is my first experience with hearing aids... with hear.com it has been a breeze! ”

Jeanne D., US | Verified Buyer

As of May 2025, hear.com has helped more than 540,000 Americans enjoy life with better hearing, thanks to Horizon IX.

Now, it's your turn!

Check if you qualify for a **45-day no-risk trial today**, and have a brand new pair of Horizon IX hearing aids on your doorstep in as little as 48 hours.

Scan the QR code or visit **hear.com/texas** to check if you qualify for a 45-day no-risk trial.

Cutting Through

Sometimes it takes a chain saw to get through the undergrowth of life

BY PATTI JONES MORGAN
ILLUSTRATION BY
HEATHER GATLEY

ONE MORNING AS I walked along a nearby lane, a chain saw's rough growl cut through the early morning peace. Startled, I discovered its source was a trim-looking man bent almost double, systematically attacking dense undergrowth along his fence line.

"Good morning!" I called out.

Finally hearing my voice over the sound of the machine, the man straightened up. "Good morning!" he replied.

"You have a lot of work there!" I called back.

He took my greeting as a welcome excuse to take a break and struggled to disengage from a tangle of old wire fencing, clinging branches and thorny tendrils. Over time, they had wound around the trees and bushes, roots, and fence posts to create a near impenetrable barrier.

Slipping off the mask that had been protecting him from clouds of wood shavings and dust, he tipped back his broad-brimmed hat with a friendly smile. He had just bought the 10 acres, he explained, and planned to build a house on it for him and his wife.

"A lot of wires, mostly rusted, and old brush have wrapped around the fence posts," he said, waving at the stringy assortment of tethers once intended to define the acreage and warn away trespassers.

Left uncontrolled, however, nature had ravenously begun converting old and new companions into little more than an unmanageable thorny fortress. No wonder wire cutters and a chain saw were needed to hack through the knots and reveal what lay hidden.

We bid our goodbyes after the neighborly visit, and the chain saw resumed its noisy attack on the underbrush jungle.

But not before I saw my own tangle—of old literary aspirations in need of similar treatment. The cacophony inspired me to clear out yesterday's words and give light, air, time and space to new ones.

A long sweltering summer arrived, partnered with the pandemic. My neighbor's sporadic chain saw activity diminished to rock gathering and wheelbarrow work.

Curious neighbors, eager to chat, began stopping by. Robert Frost's oft-quoted line from his poem *Mending Wall* sprang to mind: "Good fences make good neighbors." A conversation hub during those communication-cramped months, the gathering place had served us all well.

Completed, his low rock wall continued to speak simply about what mattered: people, purpose and permanence.

It spoke my language too. Half-hidden beneath my writing clutter lay the lyrical sounds and familiar rhythms of my old love, poetry. Revealed anew, its purpose suddenly mattered more than ever.

The chain saw's discordant sound that first morning had, it seemed, pealed an unexpected welcome. Its clarion call was sweet music to my ears. ■

Big Boy Brass Rifle

Big Boy Revolver

BUILT FOR THE TEXAS TOUGH

YOUR COWBOY KIT, COMPLETED.

Henry Repeating Arms builds guns the right way, right here in America. For plinking, hunting, collecting, passing down America's shooting sports heritage to the next generation, or protecting your family and property, choose from over 200 different models of rifles, shotguns, and revolvers in a wide variety of calibers and finishes.
